Introduction

Multi-tenant social media management and automation platform.

- Built with Next.js 15, TypeScript, Tailwind CSS, Prisma ORM + MySQL.
- Supports AI content generation (OpenAI, Anthropic, Google Gemini), automatic scheduling,
- Publishing on Instagram, Facebook, and TikTok, media library, analytics, and more.

Settings

Configuration

Application settings management page

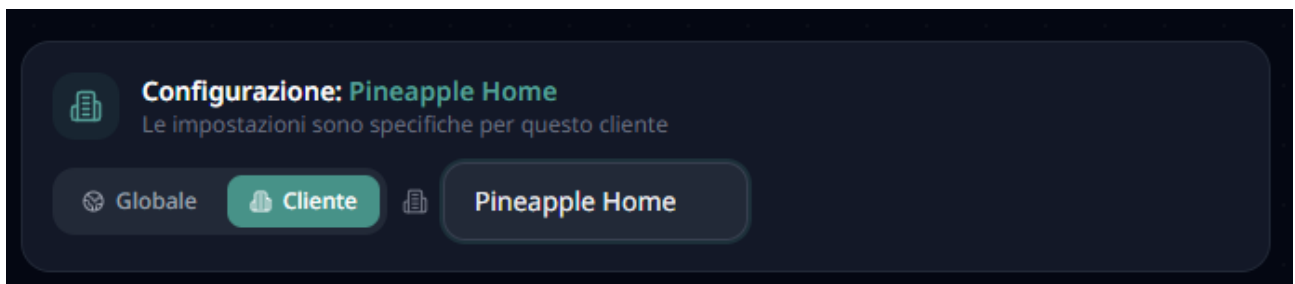

Multi-Tenancy

The configuration page is multi-tenant (by Client), allowing for global settings (for all tenants) or specific settings per Client (tenant)

GLOBAL MODE SCREENSHOT:

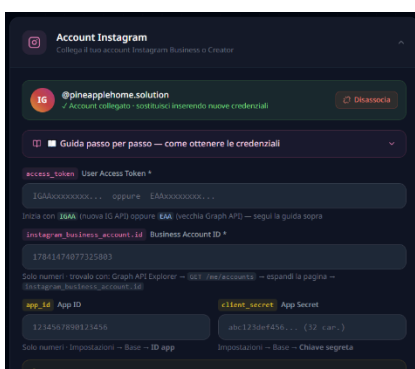

CLIENT MODE SCREENSHOT:

Instagram Account

In this section, you can link your Instagram Business Account.

The step-by-step guide makes it easy to configure Instagram API access.

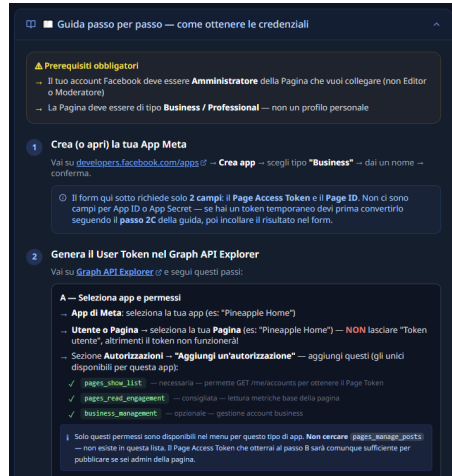

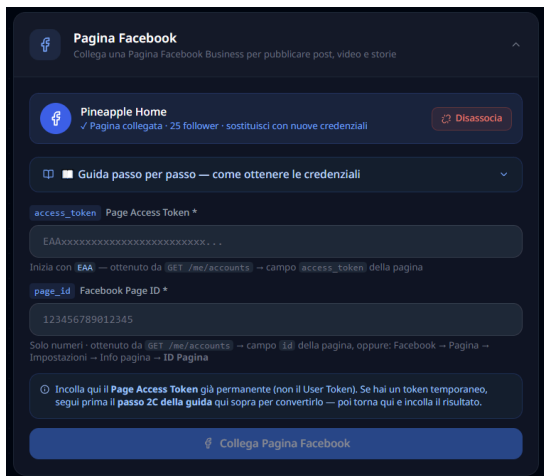

Note that App ID and App Secret are not mandatory but are required for automatic token regeneration. If not configured, you will need to create new tokens upon each expiration.

Facebook Account

In this section, you can link your Facebook Business account.

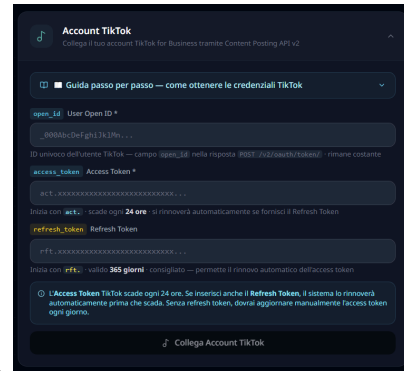

The step-by-step guide makes it easy to configure Facebook API access.

TikTok Account

In this section, you can link your TikTok account.

The step-by-step guide makes it easy to configure TikTok API access.

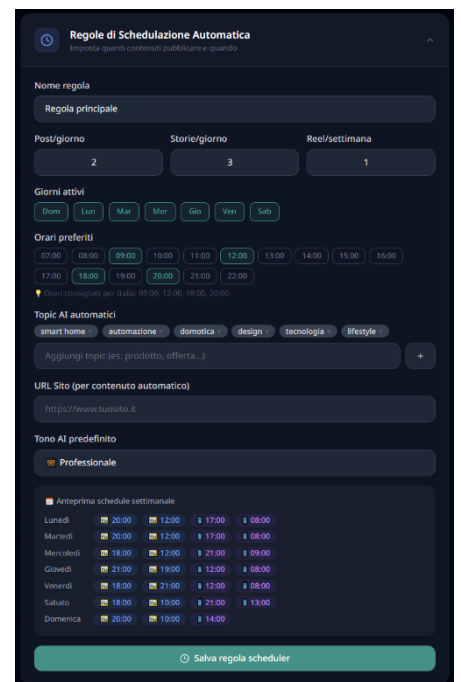

Auto-Scheduling Rules

In this section, you can schedule automatic posting frequency settings (if enabled in general settings).

Decide on which days and at what times to publish content.

Set topics for AI content generation and link a website for automatic content extraction.

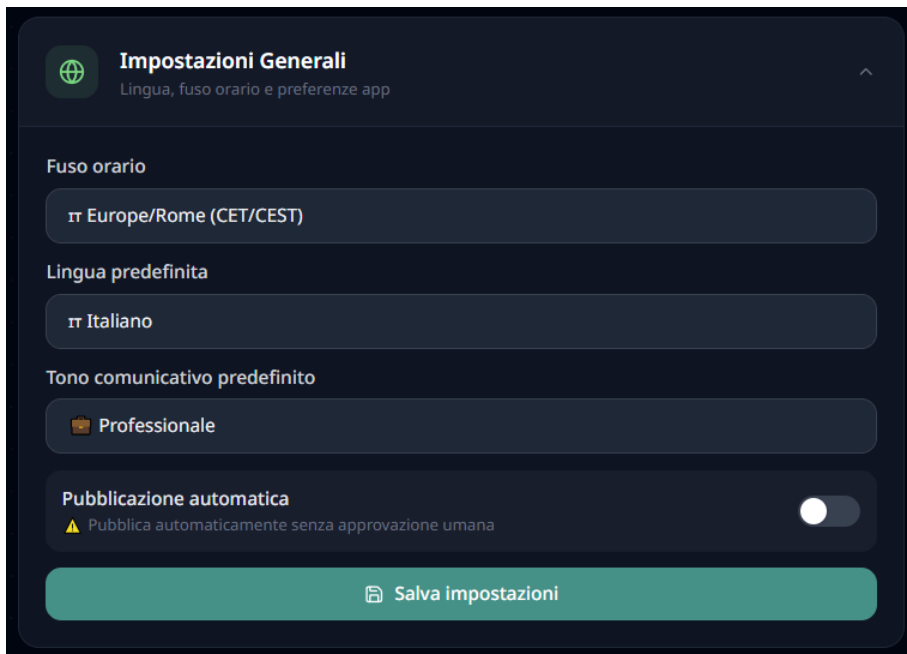

This part has not been tested yet and may not function correctly.

General Settings

General application settings:

1. Time Zone
2. Default Language
3. Communication Tone
4. Automatic Content Posting

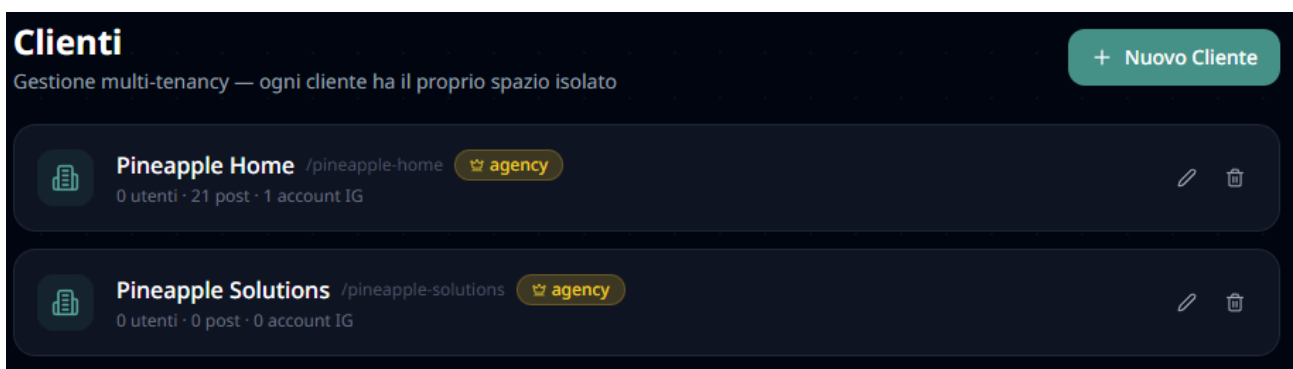

Clients

Multi-Tenancy and Plan Management

Each client has their own isolated space; from this page, you can manage clients and assign them one of the following plans:

- Free (limited features: **to be completed**)
- Pro (full features)
- Agency (full features and the ability to create new clients (sub-tenants))

Client Management

In this section, you can:

- Create a new client by clicking the "New Client" button in the top right
- Edit a client (First Name, Last Name, Plan, Logo)

- Delete a client

Clienti

Gestione multi-tenancy — ogni cliente ha il proprio spazio isolato

AI Provider

In this section, you can:

- Configure AI providers: OpenAI, Claude, or Gemini via API key (add, edit, and delete)
- Set usage limits for the respective providers
- Configure providers for specific operations with the possibility of having multi-provider configurations and managing image and video content with specific providers
- Configure provider settings per client (Tenant) or for all clients

Multi-Tenancy

The configuration page is multi-tenant (by Client), allowing for global settings (for all tenants) or specific settings per Client (tenant)

Prompt Rules

Rules are automatically injected into the prompt of every AI generation.

This allows for granular control and specific training without having to remember to insert the same recurring prompts every time:

- Rules with higher priority are applied first.
- Negative rules are sent as negative prompts to providers that support them natively (Google Imagen, Veo) and as an "ALWAYS AVOID" instruction for LLM models.

Regole Prompt Globali

Istruzioni che l'AI segue **sempre** per tutti i contenuti generati

[Genera con AI](#) [+ Nuova Regola](#)

Come funziona: Queste regole vengono iniettate automaticamente nel prompt di ogni generazione AI. Le regole **Globali** si applicano a tutti i clienti; quelle per cliente sovrascrivono le globali in caso di conflitto. Le regole con priorità più alta vengono applicate per prime. Le regole **Negative** vengono inviate come *negative prompt* ai provider che lo supportano nativamente (Google Imagen, Veo) e come istruzione "EVITA SEMPRE" per i modelli LLM.

Filtra per cliente

Tutti i clienti

Nessun testo sopra i media [Tutti i contenuti](#) [Negativo](#) [Pineapple Solutions](#) [Critica](#) ☒ [Pineapple Home](#)

Genera l'immagine senza alcun tipo di testo, scritta, didascalia o elemento grafico sovrapposto. L'immagine deve essere pulita, priva di watermark o overlay testuali, e contenere solo il soggetto richiesto.

Nessuna filigrana [Tutti i contenuti](#) [Negativo](#) [Pineapple Home](#) [Critica](#) ☒ [Pineapple Solutions](#)

Nessuna filigrana sulle immagini

con uno stile professionale e pulito; assicurati che l'immagine sia totalmente priva di watermark, loghi, scritte o filigrane di ogni tipo

UI Text language [Tutti i contenuti](#) [Pineapple Home](#) [Critica](#) ☒ [Pineapple Solutions](#)

UI Text language

Do not include any screens showing user interfaces (UI), software dashboards, or text. Strictly avoid generating any simulated, illegible, gibberish, or fake language text. Do not generate UI mockups or wireframes.

Nessuna cornice [Tutti i contenuti](#) [Negativo](#) [Pineapple Solutions](#) [Urgente](#) ☒ [Pineapple Home](#)

nessuna cornice di interfaccia sui contenuti media

Genera solo l'immagine del prodotto, senza alcun tipo di interfaccia social, senza cornici, senza testo sovrapposto e senza loghi. L'output deve contenere esclusivamente il soggetto, isolato o ambientato in un contesto neutro, in alta risoluzione.

Multi-tenancy

Global rules apply to all clients, while client-specific rules override global ones in case of conflict.

Rule Generation Mode

Automatic Generation

By selecting the client, you can automatically generate rules from the content of websites linked to the clients: Pressing the "Generate with AI" button in the top right and selecting the client allows the application to extract information and rules for that specific client via the configured AI provider.

Manual Management

You can also manually create rules by clicking the "New Rule" button in the top right

Media Library

Media are provided as visual context to the AI during the generation of posts, captions, and videos. They are passed as URLs in the system prompt.

You can import them manually, or extract photos and videos separately from a site linked to the client.

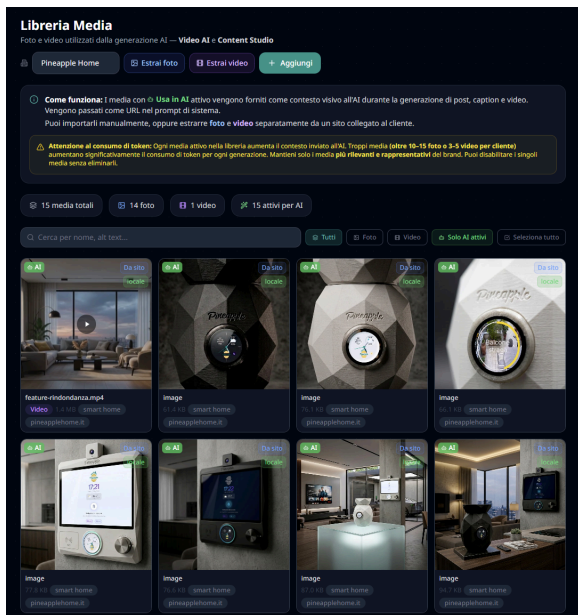

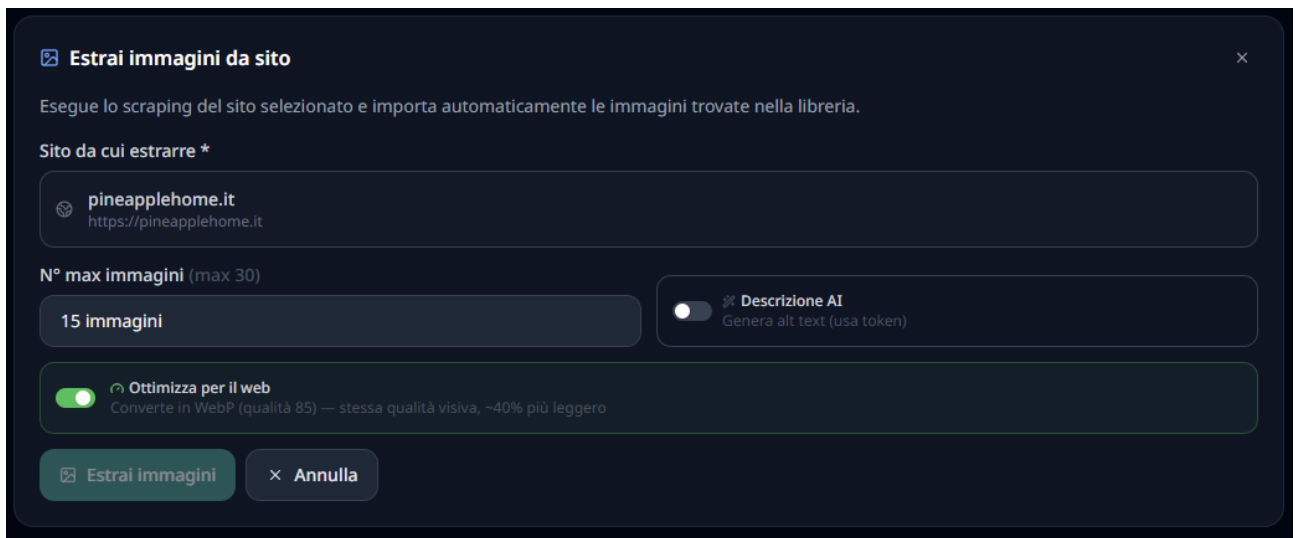

Photo Extraction

By clicking the "Extract photos" button (after selecting the site) the application, via the configured AI provider, is able to extract images from the site and persist them in its storage so that they remain available even if deleted from the source.

You can set:

- The maximum number of images to save
- AI Description: Generates the image description from the image via the configured provider
- Optimize for web: optimizes the image for the web by slightly reducing quality but maintaining visual quality (reducing size by up to 40%)

Video Extraction

Estrai video

By clicking the "Extract video" button (after selecting the site) the application, via the configured AI provider, is able to extract videos from the site and persist them in its storage so that they remain available even if deleted from the source.

Estrai video da sito

Cerca tag <video> e link diretti a file video (.mp4, .webm, .mov...) nel sito selezionato.

Solo video ospitati direttamente sul sito (file .mp4, .webm, .mov). I video incorporati da YouTube, Vimeo o altri servizi esterni non vengono estratti. Il limite massimo è 5 video per estrazione.

AI Video

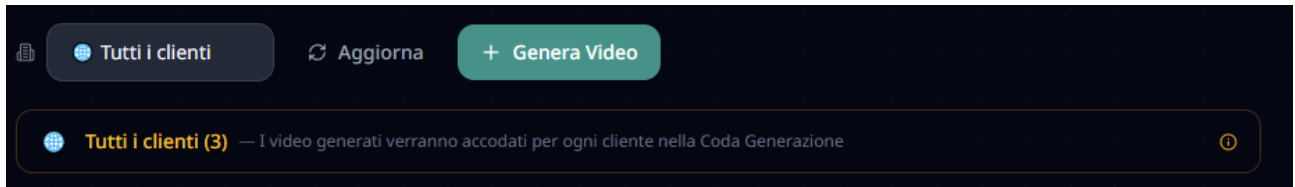

In this section, you can Generate videos, monitor the specific video queue, and previously processed videos.

Video generation with AI is only available via Google Provider

Multi-Tenancy

The section is multi-tenant, allowing you to select a specific client or all clients

AI Video Generation

In this section, you can create a new video via the configured Google AI provider

You can:

- Set the video duration (from 5 to 60 seconds).
Note that for videos longer than 8 seconds, multiple videos will be created and subsequently unified into a single video with a continuous effect
- Set content style
- Set how to remove the watermark (refer to usage limits on the specific page)
- Play generated media

Generate storyboard with AI

The AI generates scenes with durations, narration, and music — the video will faithfully follow the

The screenshot shows the 'Nuovo Video AI' interface. At the top, there's a toggle for 'Scope: tutti i clienti'. Below this is a section titled 'Genera storyboard con AI (opzionale)' with a subtext explaining that the AI generates scenes with durations, narration, and music, and that the video will follow the storyboard. A text input field contains the example topic 'domotica smart home, offerta summer sale...'. To the right of the input are buttons for 'Professionale' and 'Genera scene'. Below the input is a 'Prompt / Descrizione video *' field with the example prompt 'Descrivi il video che vuoi generare. Es: "Un appartamento moderno con domotica smart home..."'. Further down is the 'Formato' section with three options: '9:16 Verticale (Reel/Story)', '16:9 Orizzontale (Feed)', and '1:1 Quadrato'. Below the format options is a 'Durata' slider set to '5s' and a 'Stile (opzionale)' dropdown set to 'Automatico'. At the bottom is a 'Rimuovi Filigrana dal Media' section with three options: 'Dissolvenza', 'Distorsione', and 'Taglio'. At the very bottom are 'Genera Video' and 'Annulla' buttons.

storyboard. With multiple clips, continuous voice audio (TTS) is also generated.

Generation Queue

From this page, you can check the real-time status of all AI content generation jobs, with the ability to filter by specific client.

Content Status

Consult the specific status and perform improvements, modifications, model changes, duration changes, and real-time previews on individual content

Content

Content Studio

From this page, you can view and generate content via configured AI providers in three different modes:

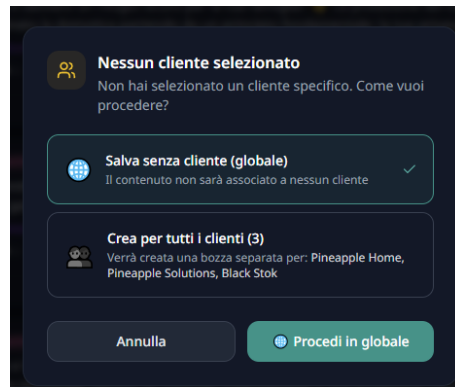

- New post (semi-assisted)
- AI Generator (automatic starting from a short description)
- Brainstorming (like AI Generator but generates 10 content proposals for each action)

It is also possible to:

- Publish content on Instagram / Facebook / TikTok
- Manually edit generated content
- Regenerate content
- Improve content via an improvement prompt
- View generated media
- Delete generated content

Multi-tenancy

The page allows selecting an individual client or generating content with the global provider (if available and configured)

New Post

A dark-themed form titled "Crea nuovo post" (Create new post) with a close button (X). It has several sections: "Piattaforma" (Platform) with buttons for Instagram, Facebook, and TikTok; "Tipo contenuto" (Content type) with buttons for Post, Story, Reel, and Carousel; a note "Il Reel genera sempre un video tramite il modello Video AI (Veo) configurato" (Reel always generates a video using the configured Video AI (Veo) model); a "Durata Reel" (Reel duration) slider set to 8s; a "Genera contenuti con AI" (Generate content with AI) section with a topic input field, a "Genera" button, and a "PROVIDER AI" dropdown; a "Caption" section with a text area and a "AI genera" button; a "Scene storyboard" section with a "+ Aggiungi scena" button; a "Hashtag" section with an input field; and a "Media per il post" section with an "AI genera" button. At the bottom are "Annulla" (Cancel) and "Salva bozza" (Save draft) buttons.

In this section, you can create new content in semi-assisted mode.

1. Select the Platform (Instagram, Facebook, TikTok)
2. Select the content type (Post, Story, Reel, or Carousel based on platform availability)
3. Media type to generate (Photo or video based on content type)

NB: In Reel mode, you can set the Duration and automatic scene generation for the storyboard (also manageable manually)

4. Select reference media for the post (optional)
5. Configure watermark removal settings (optional)
6. Enter a topic, select the style, select the provider and click "Generate" to automatically generate:
 - a. Caption
 - b. Hashtag
 - c. Storyboard scenes

NB: Specific fields can also be defined manually.

AI Generator

Allows creating content starting from a topic or an idea with the same features as "New Post" but with more specific customization options.

Like the other mode, it allows inserting media as input (photos and videos)

The screenshot shows the 'AI Generator' interface. At the top, there are tabs for 'Post Manager', 'AI Generator' (which is active), and 'Brainstorming'. Below the tabs, there are two buttons labeled 'Pineapple Home'. A status bar indicates '✓ Pineapple Home / Pineapple Home — I contenuti creati saranno associati a questo cliente'. The left sidebar contains several sections: 'Piattaforma di destinazione' with buttons for Instagram, Facebook, and TikTok; 'Tipo contenuto' with buttons for Caption, Hashtag, and Post Completo (which is highlighted); 'Formato post' with buttons for Post, Story, Reel, and Carousel; 'Tipo media da generare' with buttons for Immagine (Foto statica AI) and Video (Clip animata AI); 'Topic / Idea' with a text input field containing 'es: Presentazione del nuovo dispositivo smart home, offerta speciale...'; 'URL Sito * obbligatorio' with a dropdown menu showing 'https://pineapplehome.it'; 'Sito associato: Pineapple Home'; 'Tono comunicativo' with buttons for Automatico, Professionale, Amichevole, Divertente, Inspirazionale, Luxury, and Minimal; 'Lingua' with a dropdown menu showing 'Italiano'; 'Descrizione immagine (opzionale)' with a text input field containing 'es: Foto del prodotto su sfondo bianco'; and 'Call to Action (opzionale)' with a text input field. The main right area is titled 'Risultato AI' and is currently empty, showing a large dark space with a small robot icon and the text 'Scegli la piattaforma e premi "Genera con AI"' and social media icons for Instagram, Facebook, and TikTok.

Brainstorming

Generates 10 random content ideas starting from a topic or an idea and setting your preferences:

- Topic
- Site
- Tone
- Language
- Media input
- Provider selection
- Watermark removal settings

 **Genera nuove idee con AI**

 **Genera 10 idee** 

Nessuna idea generata

Scegli la piattaforma, inserisci un topic e premi "Genera idee"

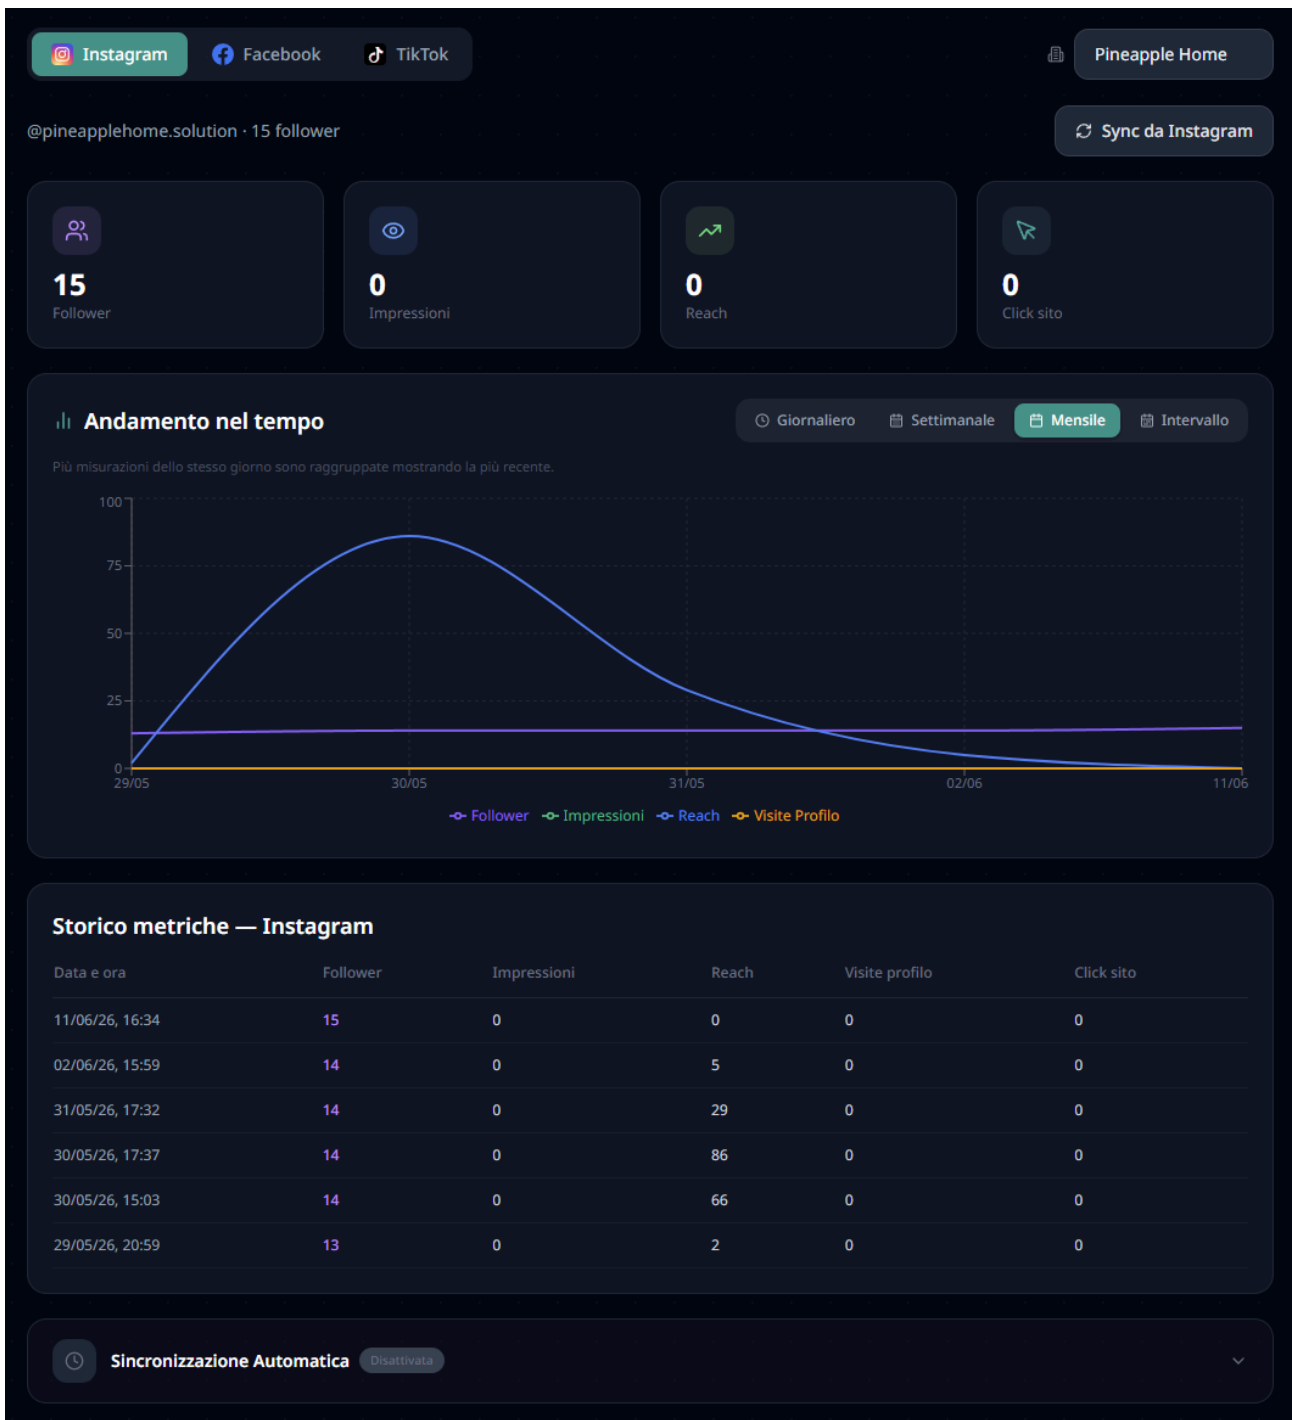

By clicking the "Generate 10 ideas.." button, 10 random pieces of content are generated (post, story, reel, or carousel for various differentiated social networks). Upon individually approving the ideas, they go into the queue for media generation (created after approval to save tokens)

Analytics

You can filter statistics by client and social platform and set the recording frequency of statistics for each specific social network

Multi-tenancy

You can filter by client to view client-specific statistics or have a total statistical view of all clients

Manual Synchronization

By clicking the "Sync..." button, information is manually synchronized

Automatic Synchronization

You can enable automatic synchronization for each Social in a granular way by setting the frequency (date and time) via a guided configuration or a custom CRON

The interface is titled 'Sincronizzazione Automatica' with a status 'Attiva' (Active). Below the title, it says 'ogni giorno alle 02:00 - INSTAGRAM, FACEBOOK, TIKTOK'. A toggle switch for 'Abilita sync automatica' is turned on, with the note 'Il sistema raccoglierà le metriche in background'. Under 'PIATTAFORME', there are buttons for 'Instagram', 'Facebook', and 'TikTok', each with a checkmark. Two main configuration buttons are present: 'Configurazione guidata' (Guided configuration) and 'CRON personalizzato' (Custom CRON). The 'CADENZA' (Frequency) section shows four options: 'Ogni ora', 'Ogni giorno' (selected), 'Settimanale', and 'Mensile'. The 'ORARI DI ESECUZIONE' (Execution times) section allows selecting multiple hours from a grid of 24 slots. The '02' slot is highlighted. Below the grid, it says 'Selezionati: 02:00'. A summary bar shows 'Pianificazione: ogni giorno alle 02:00'. At the bottom left, it says 'Cron di controllo ogni 30 min'. A 'Salva configurazione' (Save configuration) button is at the bottom right.

Campaigns

The form is titled 'Crea nuova campagna'. At the top, there are filters for 'Tutti i clienti' and 'Tutti i siti', and a '+ Nuova campagna' button. The form fields include: 'Nome campagna *' with a placeholder 'es: Lancio Primavera 2026'; 'Descrizione' with a placeholder 'Obiettivo e strategia...'; 'Obiettivo' with a dropdown menu showing 'Brand Awareness'; 'Data inizio' and 'Data fine' with date pickers in 'gg/mm/aaaa' format. At the bottom, there are 'Annulla' and 'Crea campagna' buttons. Below the form, there is a lightning bolt icon and the text 'Nessuna campagna'.

From this page, you can create Campaigns for specific purposes and goals by setting start and end dates, grouping content by campaign.

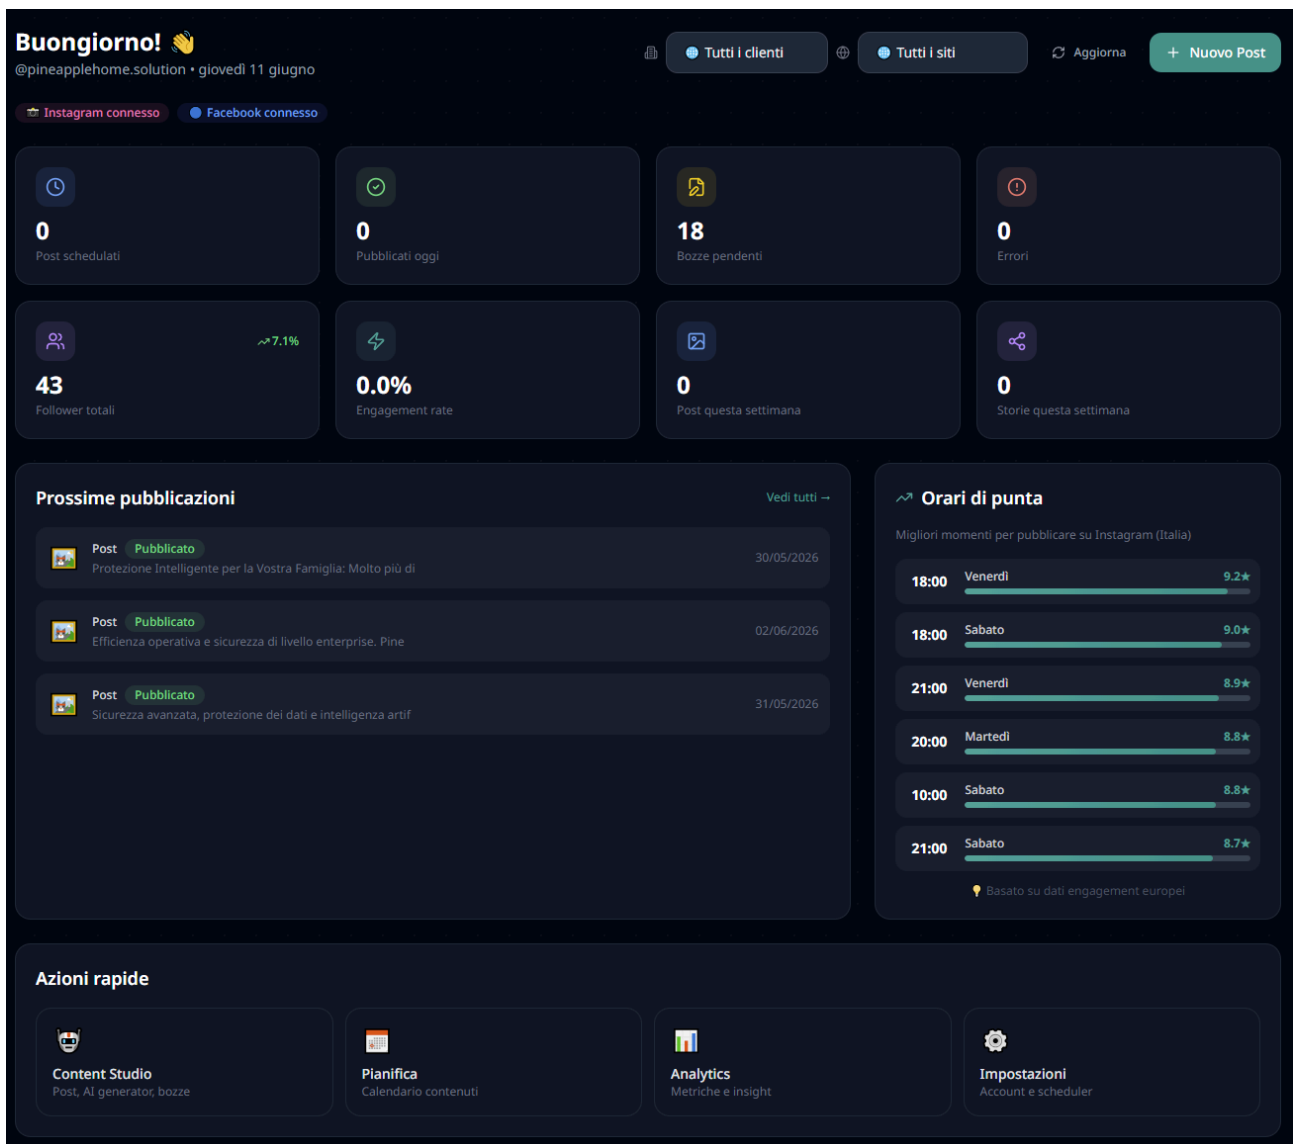

The "Create campaign" button allows you to generate a full campaign plan including scheduling via the configured AI provider

Multi-tenancy

This page allows creating campaigns for individual clients/sites or for all clients/sites using the appropriate filters for client and site

Dashboard

General statistics monitoring and content publication planning page with access to quick actions and the creation of a new post.

Site UI

The site interface is Responsive and optimized for all devices.

Light and dark theme modes are available

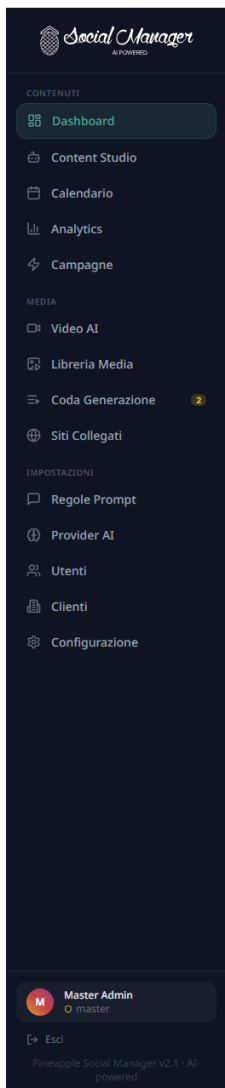

Main Navigation Bar

From the navigation bar, you can:

- view the title and description of the current page
- monitor the status of the automatic scheduler
- change the theme (dark or light)
- consult notifications (**not yet developed**)
